Education

Bachelor of Engineering in Computer Engineering , Chulalongkorn University, Bangkok, Thailand
Expected Graduation: 2027, GPAX: 3.85

Experiences

Pixelmath | Data Scientist (Jan 2026 – Present)

- Analyzed transaction logs and Meta ad data to derive actionable insights, directly influencing fiscal budget allocation
- Developed an RFM segmentation model to launch personalized marketing promotions, increasing customer retention
- Created a Weighted Efficiency Metric for cross-category post performance to optimize organic content strategy

SCB | AI Engineer & Automation Engineer (Jun 2026 – Jul 2026)

- Engineered and deployed an end-to-end enterprise RAG chatbot, built scalable Data Pipelines using Python, SQL, and Databricks for data processing, integrated with Azure AI Search for optimized retrieval.
- Architected tailored enterprise solutions and low-code applications using Power Automate, reducing manual bottlenecks by automating service logics and operational workflows.
- Leveraged Azure AI Search and Python to execute entity resolution, successfully resolving cross-bank account name discrepancies and accurately linking mismatched identities for high-precision transaction analysis.
- Analyzed email data patterns using Python to design classification logics, then automated request routing via Power Automate, significantly reducing manual handling time.
- Revamped the questionnaire module using TypeScript, developing interactive navigation features that enable end-users to instantly identify and jump to unanswered questions, significantly enhancing user completion rate and UX.

Projects

Car Rental Platform | Full-Stack Developer & Scrum Master ([GitHub](#)) (Aug 2025 – Dec 2025)

- Built server-side rendered (SSR) front-end components and serverless API routes using Next.js, integrating Stripe gateway and webhooks for transaction processing.
- Standardized development environments using Docker and implemented a CI pipeline via GitHub Actions for automated linting, testing, and builds across an 11-person team.
- Conducted rigorous code reviews to enhance software maintainability and eliminate code smells.
- Tech Stack: Next.js, React, TypeScript, Supabase, PostgreSQL, Docker, GitHub Actions, Jest

Chula TextMe Platform | Full-Stack Developer ([GitHub](#)) (Oct 2025 – Nov 2025)

- Engineered a real-time messaging backend architecture using Node.js, Express.js, and Socket.IO to support low-latency private and group chat functionalities.
- Implemented secure authentication pipelines using JWT and bcrypt, alongside designing MongoDB schemas for robust user data and chat history persistence.
- Maintained and refactored React front-end components to synchronize complex WebSocket states, ensuring seamless feature delivery and enhanced user experience.

Automated Vocabulary Tutor Bot | (May 2026): Architected an automated Python data pipeline using OCR for vocabulary extraction, integrated with a reliable scheduling system to deliver daily morning lessons to users.

Technical Skills

Programming & Frameworks: TypeScript/Javascript, Python, Go, Java, C++, React, Next.js, Node.js, Vue.js, Nuxt.js, Express.js

Data, Cloud & DevOps: PostgreSQL, MongoDB, Supabase, Azure, Databricks, Docker, Git/GitHub Actions

Languages: Thai (Native), English (Conversational Proficiency)

Certifications & Activities

Certificates: HCCDA-Tech Essential (Huawei), Developing Back-End Apps with Node.js and Express (IBM), Full-Stack Development (Chula MOOC), Data Structures Specialization (University of Illinois), and [others](#)

Intania Hackathon 2025: Developed a backend RESTful API for an educational game prototype within a 48-hour deadline. ([GitHub](#))
