Summary

A proactive third-year Computer Engineering student with hands-on experience in software development through academic projects and hackathons. A fast learner with a passion for technology

Education

Bachelor of Engineering in Computer Engineering , Chulalongkorn University, Bangkok, Thailand

Expected Graduation: 2027, GPAX: 3.84

Experiences

SCB | Intelligent Automation Solutions Architect

Jun 2026 – Present

- Analyzed team operational behaviors and service logics to design and architect tailored solutions via Power Automate, eliminating manual bottlenecks.
- Resolved cross-bank account name discrepancies by implementing an entity resolution logic, accurately linking mismatched names to unique users and improving transaction analysis precision
- Developed and deployed an end-to-end enterprise chatbot using RAG architecture, leveraging Databricks for data pipelines and Azure AI Search for optimized retrieval.
- Designed and implemented an Intelligent Email Classification system, automatically routing and processing incoming requests to reduce manual handling time.
- Executed seamless SharePoint data migration while maintaining existing automation pipelines to ensure 100% uptime

Pixelmath | Data Scientist

Jan 2026 – Present

- Analyzed transaction logs and Meta ad data to derive actionable insights, directly influencing fiscal budget allocation
- Developed an RFM segmentation model to launch personalized marketing promotions, increasing customer retention
- Created a Weighted Efficiency Metric for cross-category post performance to optimize organic content strategy

Projects

Car Rental Platform | Full-Stack Web Application - Scrum Master ([GitHub](#) | [Live Demo](#)) Aug 2025 – Dec 2025

- Built server-side rendered (SSR) front-end components and serverless API routes using Next.js, integrating Stripe gateway and webhooks for transaction processing.
- Standardized development environments using Docker and implemented a CI pipeline via GitHub Actions for automated linting, testing, and builds across an 11-person team.
- Conducted rigorous code reviews to enhance software maintainability and eliminate code smells.
- Tech Stack: Next.js, React, TypeScript, Supabase, PostgreSQL, Docker, GitHub Actions, Jest

Technicals Skills

Programming Languages: Python, JavaScript, TypeScript, Go, Java, C++, HTML, CSS

Cloud & AI Platforms: Microsoft Azure (Azure AI Search), Databricks, Supabase

Automation & Frameworks: Power Apps, Power Automate, Next.js, React, Node.js, Express.js

Databases & DevOps: PostgreSQL, MongoDB, Docker, GitHub Actions, Git

Languages: Thai (Native), English (Conversational Proficiency)

Certifications & Activities

- **Multi-armed Bandit Optimization Challenge (CEM II)** ([GitHub](#))
Engineered a multi-stage RL strategy (Thompson Sampling) in Python to optimize e-commerce variants via RESTful APIs.
- **Intania Hackathon 2025** ([GitHub](#)): Developed a backend RESTful API for an educational game prototype under a 48-hour deadline.
- **Certificates:** HCCDA-Tech Essential (Huawei), Developing Back-End Apps with Node.js and Express (IBM), Full-Stack Development (Chula MOOC), Data Structures Specialization (University of Illinois), and [others](#)
- **Independent study** on DeepLearning.AI "Knowledge Graphs for RAG" to master Neo4j graph databases for advanced AI retrieval applications
