Education

Bachelor of Engineering in Computer Engineering , Chulalongkorn University, Bangkok, Thailand
Expected Graduation: 2027, GPAX: 3.85

Experiences

Yuanta Securities Thailand | AI Product Engineer (Aug 2026 - Present)

- Architected an enterprise Multi-Agent financial platform using LangGraph and FastAPI, dynamically routing queries across PostgreSQL (quantitative screening), Neo4j (causal reasoning), and pgvector via a low-latency streaming API.
- Engineered an automated Airflow ingestion pipeline integrating CMS APIs, bilingual OCR, two-pass LLM extraction, and deterministic validation gates to eliminate hallucinations into PostgreSQL/pgvector.
- Developed an automated content and creative engine using modular AI skill packs, converting Wealth research decks into tailored multi-channel social drafts and branded generative visual assets for human-in-the-loop review.
- Established an institutional 6-layer evaluation framework and production guardrails, combining a 500-case golden benchmark, LLM-as-a-judge, numerical fidelity gates, and Langfuse v3 observability.

SCB | AI Engineer & Automation Engineer (Jun 2026 – Jul 2026)

- Engineered and deployed an enterprise RAG chatbot and scalable data pipelines using Python, SQL, Databricks, and Azure AI Search for high-precision document retrieval.
- Implemented entity resolution algorithms using Azure AI Search and Python, resolving cross-bank account discrepancies and accurately linking mismatched identities for transaction analysis.
- Streamlined internal banking workflows by analyzing email patterns with Python and automating operational routing via Power Automate, reducing manual handling time.

Pixelmath | Data Scientist (Jan 2026 – Present)

Spearheaded marketing analytics by developing RFM segmentation models and cross-channel performance metrics from transaction and Meta ad data, directly optimizing customer retention and fiscal budget allocation.

Projects

PorTCAS Chatbot Service | AI Intelligence Lead (Capstone Project) (Aug 2026 - Present)

- Developed a multi-turn coaching agent and compliance engine to guide university applicants and audit portfolio achievements against official admission rubrics.
- Implemented autonomous retrieval for admission criteria and competitions, integrating real-time mental health guardrails and resilient failure fallbacks.
- Built an automated multimodal evaluation suite with a 200-sample benchmark, conducting architectural ablation studies and enforcing CI quality gates.
- Engineered event-driven telemetry and data models to track real-time token usage, operational inference costs, and student progression analytics.

Gelato Management Platform | Backend Developer & DevOps (GitHub) (Aug 2026 - Present)

- Built an asynchronous analytics microservice in Go (Fiber), MongoDB, and RabbitMQ, optimizing concurrency and resolving data race conditions.
- Automated core development infrastructure using Docker and designed GitHub Actions CI/CD pipelines integrated with LLM-powered code reviews.
- Tech Stack: Next.js, Go (Go-Fiber), RabbitMQ. Docker, GitHub Actions, LLM APIs

Technical Skills

AI & Agentic Systems: Multi-Agent Systems, LangGraph, GraphRAG, Hybrid Search, Azure AI Search, Prompt Engineering
Languages & Backend: Python, Go, TypeScript/JavaScript, Java, C++, FastAPI, Node.js, Next.js, React, Express.js
Databases, Cloud & DevOps: Neo4j (Cypher), PostgreSQL, MongoDB, Databricks, Azure, Supabase, Docker, Git, CI/CD (GitHub Actions)
Languages: Thai (Native), English (Conversational Proficiency)
